A Brief History of Flight

Of all human endeavors, none has captured people's imaginations quite like flight. Stories of wing-tipped shoes and flying carpets have existed for millennia. Leonardo da Vinci's notebooks show sketches of flying machines long before the first successful, albeit short, forays into the sky. This is an overview of some of the important moments in aviation.

EARLY MODERN AVIATION

Not Just Hot Air

During the Industrial Revolution, British chemists made discoveries about the properties of gases. These discoveries paved the way for Joseph-Michel and Jacques-Étienne

Early hot air balloon flight

Montgolfier to build and fly the world's first hot air balloon in 1783. They built a globe-shaped balloon using taffeta and filled it with smoke from burning straw and wool. By the early 1800s, hot air balloons had become commonplace, and elongated balloon-shaped airships, often referred to as zeppelins, were developed as a way to fly with more speed and control. But as the 20th century approached, excitement over buoyant aircraft waned as interest shifted to airplanes.

The "Father of Aeronautics"

George Cayley was a British engineer whose discoveries led many to consider him the father of aeronautics. Cayley identified the four aerodynamic forces of flight (weight, lift, drag, and thrust), paving the way for all heavier-than-air flight. He is also credited as the first to scientifically understand wing shape and designed the first glider to effectively carry a person.

Up, Up, and Away

While several pioneers were instrumental in the development of winged heavier-than-air flight, the Wright brothers are widely credited with designing and building the world's first successful airplane.

The Wright Brothers, 1903

After implementing a movable rudder as a better means of controlling and stabilizing flight in a glider, the Wrights' next task was propulsion. They built their own 12-horsepower engine and aircraft propeller. On December 17, 1903, the *Wright Flyer* became the first aircraft to triumphantly take flight. History was made.

In 1908, a rival American inventor, Glenn Curtiss, built a successful airplane. A patent race ensued among the Wrights, Curtiss, and other American inventors, propelling the technology. Other inventors from around the world, including Alberto Santos-Dumont and Anthony Fokker, joined in as well. In the years leading up to World War I, airplane races in Europe and America spurred excitement over the emerging technology.

The Great Barrier Reef

PART 1: E

Of all the amazing creatures in the world, few are as incredible as the sea turtles. These magnificent creatures have been around for millions of years and are still thriving today. They are found in all the world's oceans and are a vital part of the marine ecosystem. Unfortunately, they are also one of the most endangered species in the world. Many of them are being killed by fishing boats, and their habitats are being destroyed by human activity. It is our responsibility to protect these amazing creatures and their homes. Here are a few notable facts about sea turtles:

- There are six different species of sea turtle in the Great Barrier Reef. All of them are endangered because of egg stealers. They are a delicacy in some parts of the world.

The Sea Turtle

There are six different species of sea turtle in the Great Barrier Reef. All of them are endangered because of egg stealers. They are a delicacy in some parts of the world.

The Father of Aeronautics

George Cayley was a British engineer whose discoveries led many to consider him the father of aeronautics. Cayley identified the four aerodynamic forces of flight (weight, lift, drag, and thrust) that paved the way for all heavier than air flight, credited as the first to scientifically understand the wing shape. He was also the designer of the first successful glider to carry a person.

Up, up, and away

While several pioneers were instrumental in the development of winged, heavier than air flight, the Wright brothers are widely credited with designing and building the world's first successful airplane.

The Wright Brothers, 1903

After implementing a moveable rudder as a better system for controlling and stabilizing flight in the glider, the Wright's next task was propulsion. They built their own 12-horsepower engine and aircraft propeller. On December 17th, 1903, the Wright Flyer became the first aircraft to successfully take flight. History was made.

Not long after, a rival American inventor, Glenn Curtis, built his successful airplane in 1908. A patent race ensued between the Wrights, Curtis, and other American inventors, propelling the technology. European inventors joined the race, including names like Alberto Santos-Dumont and Anthony Fokker. Leading up to World War I, airplane races in Europe and America spurred excitement over the emerging technology.

Details

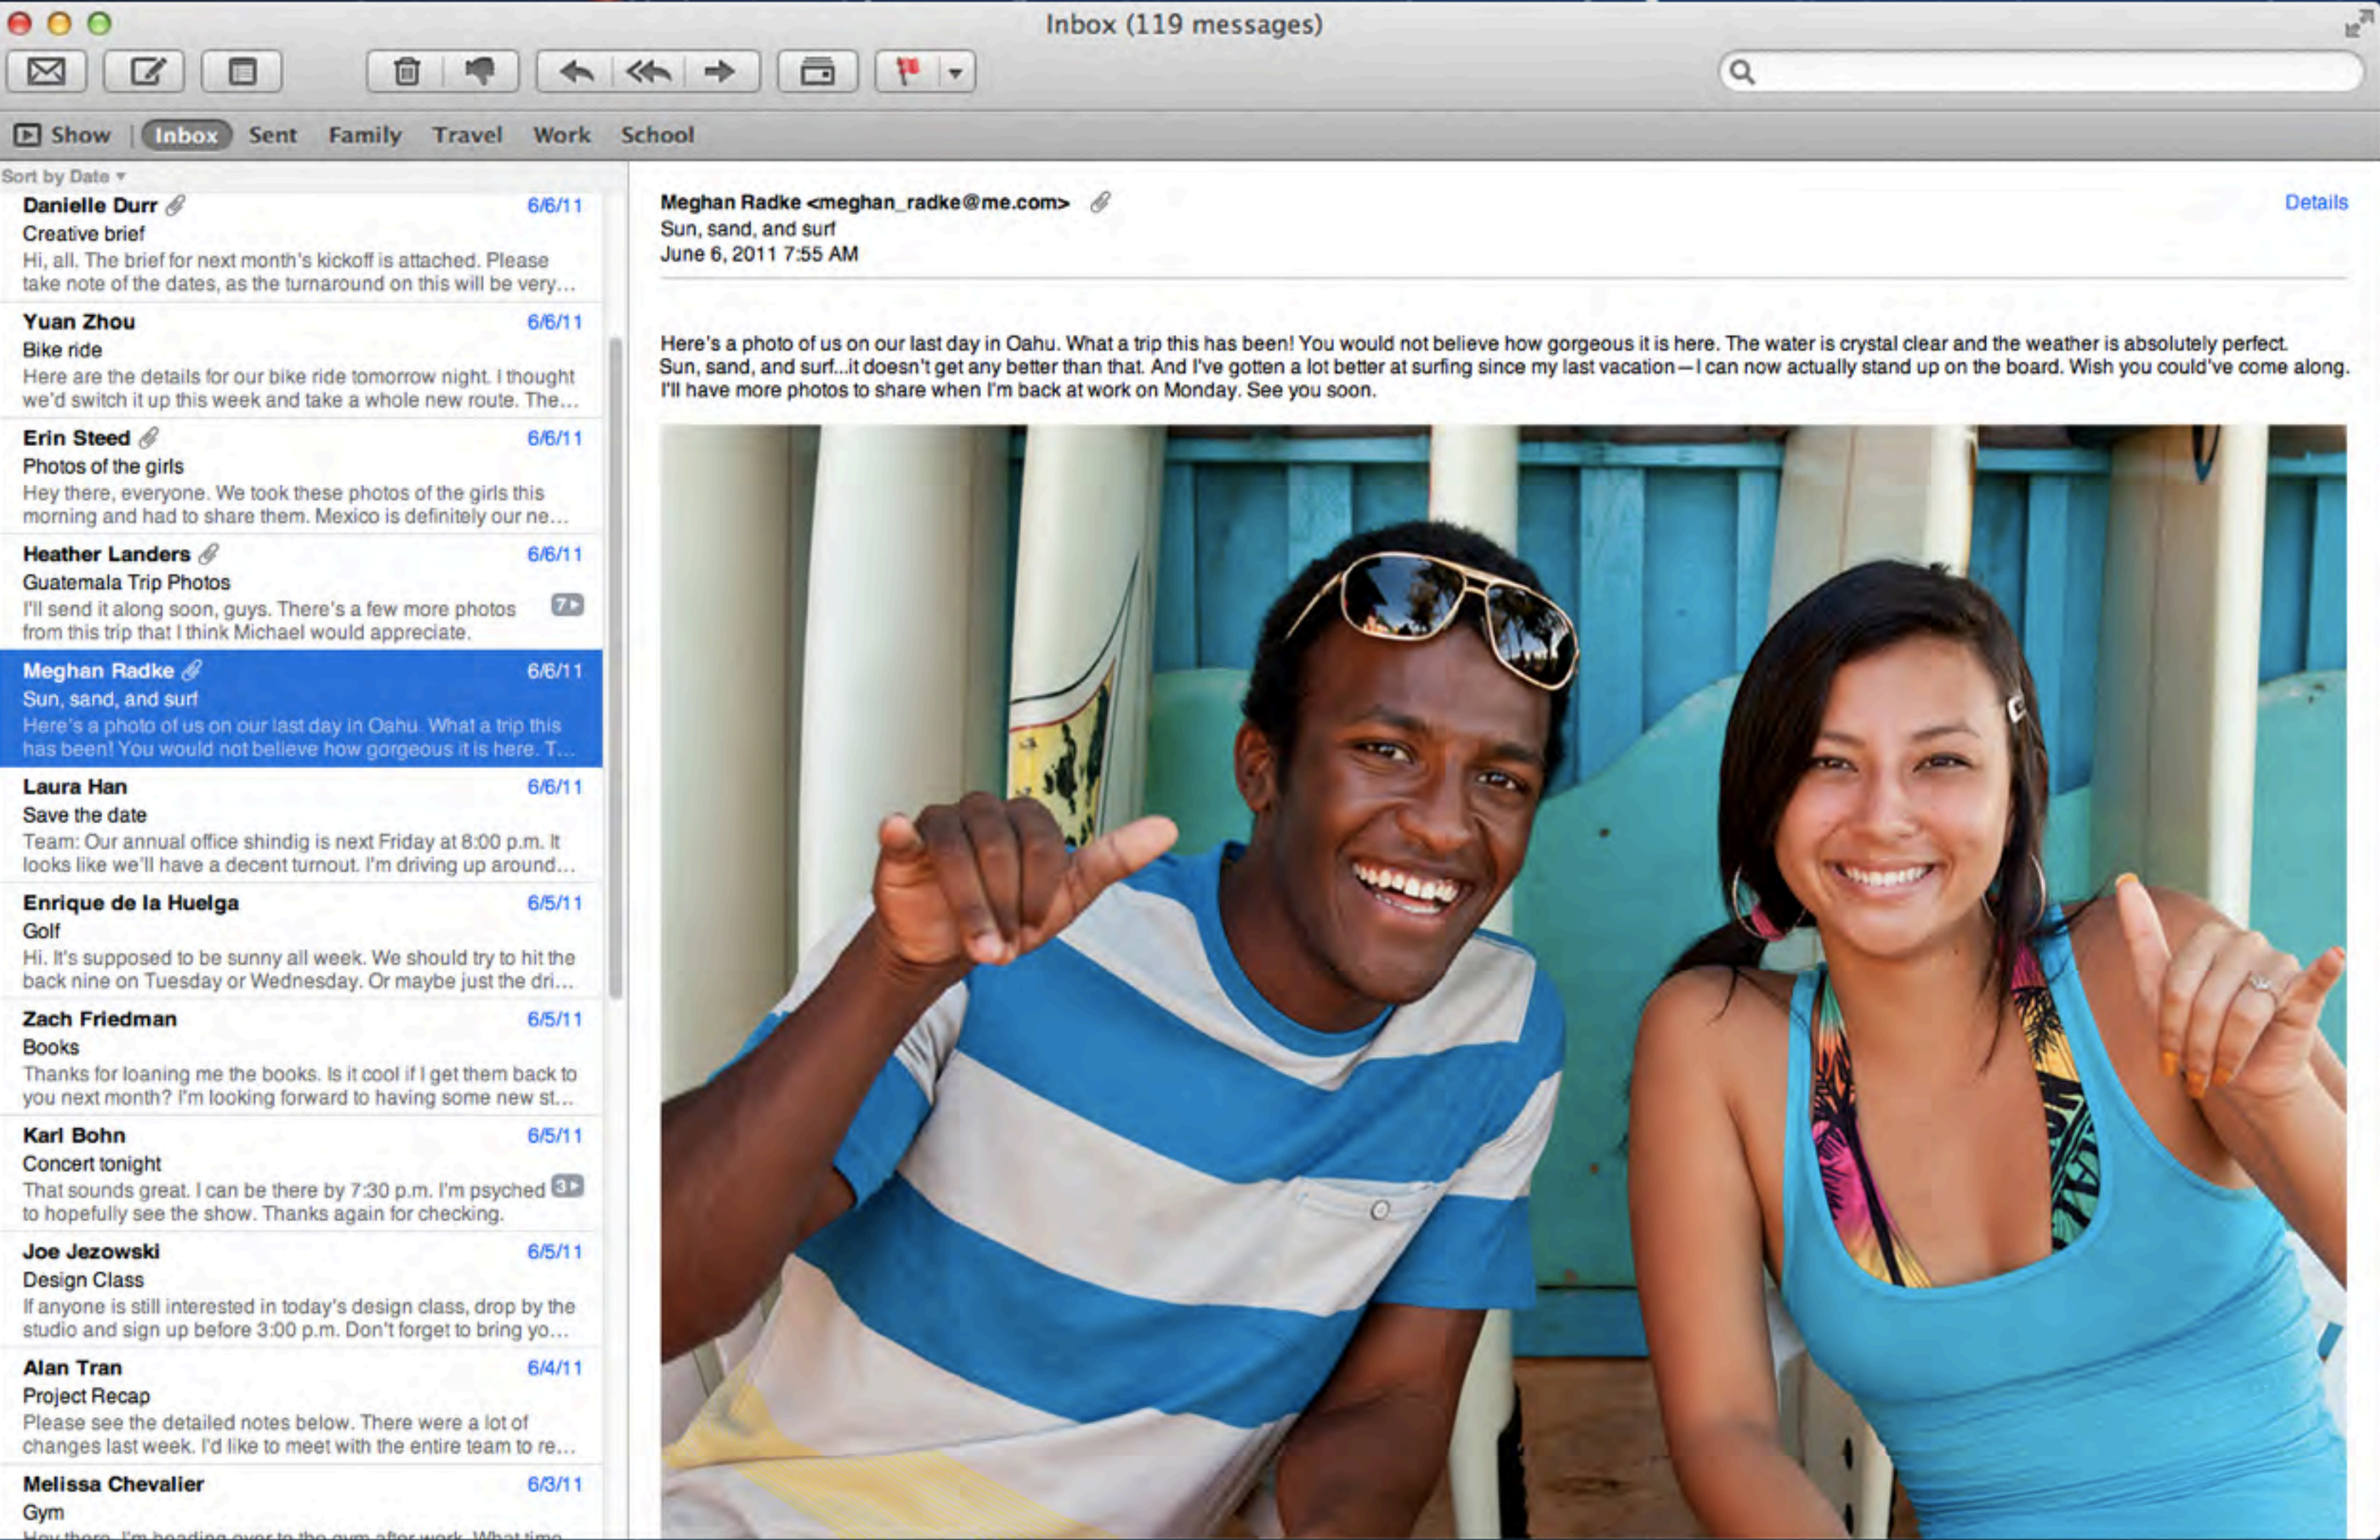

Here's a photo of us on our last day in Oahu. What a trip this has been! You would not believe how gorgeous it is here. The water is crystal clear and the weather is absolutely perfect. Sun, sand, and surf...it doesn't get any better than that. And I've gotten a lot better at surfing since my last vacation—I can now actually stand up on the board. Wish you could've come along. I'll have more photos to share when I'm back at work on Monday. See you soon.

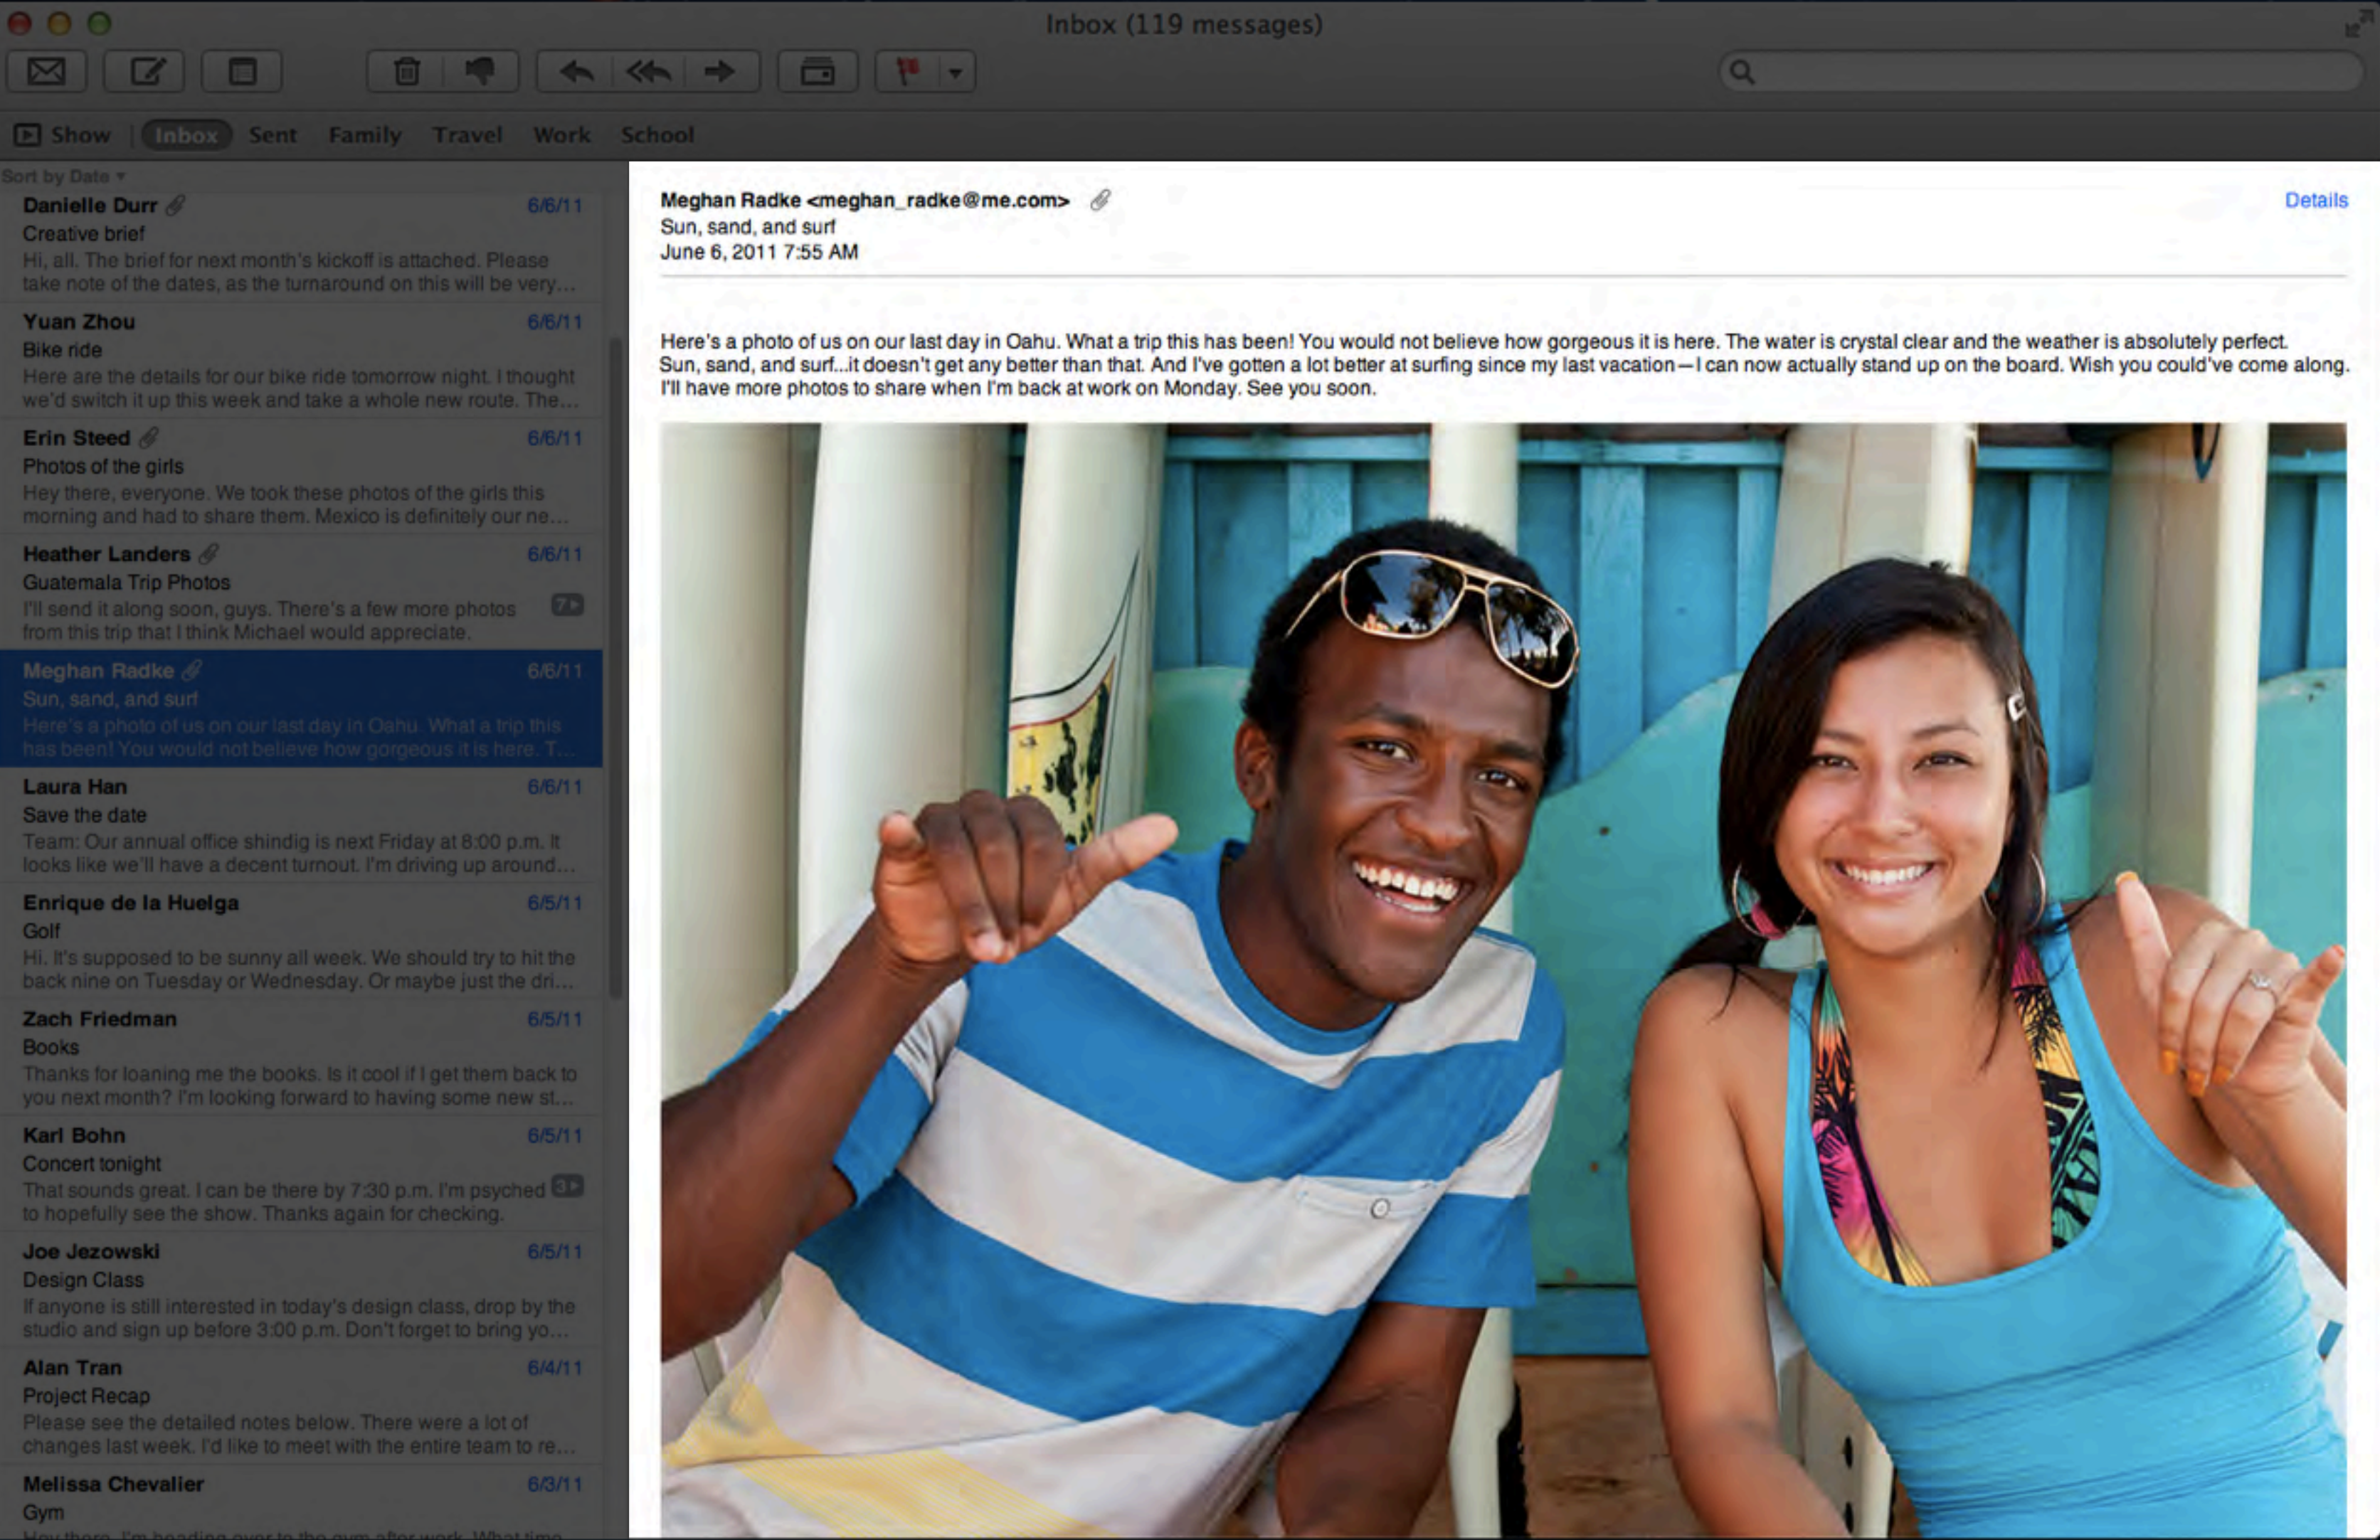

A photograph of a man and a woman sitting outdoors. The man, on the left, is wearing a blue and white striped t-shirt and sunglasses perched on his head. He is smiling broadly and pointing his right index finger towards the camera. The woman, on the right, is wearing a light blue tank top over a colorful patterned halter. She is also smiling and pointing her right index finger towards the camera. They appear to be in front of a wooden fence or railing.

OS X Lion

OS X Lion is the next major release of the world's most advanced operating system. With over 250 new features, Lion will help you interact with your Mac in entirely new ways. Swipe, scroll, and tap your way through your apps using your Multi-Touch trackpad or Magic Mouse. Enjoy even more fluid and realistic gesture response, including rubber-band scrolling, page and image zoom, and full-screen swiping. Lion offers systemwide support for immersive, full-screen apps that use every inch of your Mac display. You can have multiple full-screen apps open at once — along with multiple standard apps. And it's easy to switch between full-screen and desktop view. Launchpad gives you instant access to your apps. Just click the new Launchpad icon in your Dock and open windows fade away, replaced by a full-screen display of all the apps on your Mac. And Mission Control gives you a bird's-eye view of all your windows, full-screen apps, open...
